Intelligent trace analysis

Intelligent trace analysis Dynamic display of test results

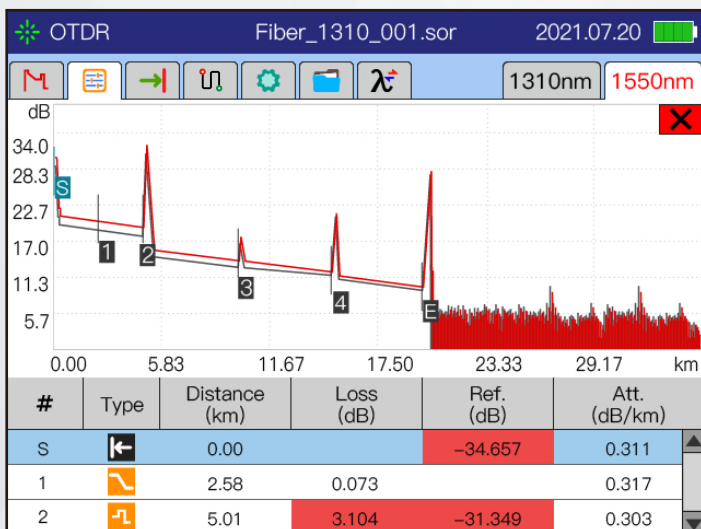

The test results are shown in a trace with distance on horizontal axis, lost power on vertical axis. When too many events, the horizontal and vertical axes can be enlarged to analyze.

Events List & Summary View

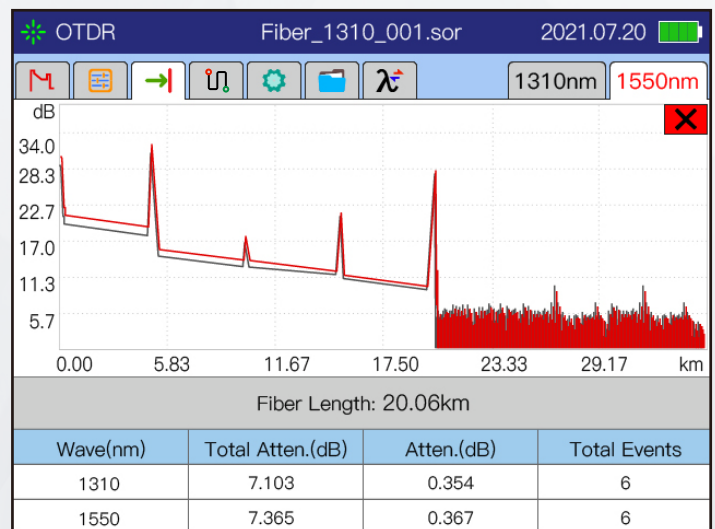

Events List

Optical cable breakpoint, loss, length, bending, connection, etc., in the trace, the loss or reflection obtained by the test is represented by events, and three event parameters can be viewed at the same time.

Summary View

Trace figure, length, total attenuation and attenuation coefficient in (dB).

Link Map

Link Map Function Icon Displays Events

A simple and intuitive graphical interface displays the length, event type, and breakpoint location of optical fiber links. One-click test operation enables instant isolation and evaluation of optical fiber failures.
